

SETTING UP YOUR RADIO RECORDING ROOM AT HOME

The Impact Radio Kit can be moved from your office to your home or any another location. There are a few things we need to check before you can move the kit.

What is the speed of the internet service at the new location?

Usually we recommend a minimum download speed of 50Mbps, with a minimum upload speed of 5Mbps. You can check that by running a speed test at <https://www.speedtest.net/>.

Do you have a wired connection at the new location?

The Radio Kit must be plugged into a hard-wired ethernet connection. The Radio Kit will not work over Wi-Fi. Usually the back of your router has some open ports. You may need a long cable to connect the Radio Kit to your router.

What does the room you are planning to use sound like?

Large rooms with lots of glass and hardwood floors are not the best location to record. Small rooms with carpeted floors and drapes over the windows tend to be better. You can test the room by standing in the middle and clapping your hands. If you hear the claps bouncing around the room, then it will most likely not be suitable for recording. If the room sound dead and muffled, the room will be perfect.

What is the best way to place your mic?

When you point the mic at your mouth and speak directly into it, the mic will pick up any sound that is behind you. Watch for highly reflective surfaces behind you like windows or big flat walls. Some people use an open closet behind them or even add a blanket to the wall behind them to improve their sound. You can setup the Radio Kit and listen without being connected to the internet. Try moving around to different places in the room and attempt to make the room sound less hollow.

How do I move the Kit?

Unplug all the cables and place them, and all the mics, and Radio Kit in the case that the Radio Kit was delivered. When you get to the new location, put the Radio Kit back together, and connect the ethernet cable. If you need assistance, contact your Impact Radio Host. They can work with you to make sure you are set up.

If you need any further assistance you can contact your Sales Coach who will put you in touch with our Director of Engineering.
